

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of claims:

Claims 1. – 105. (Cancelled)

106. (Previously Presented) A mobile terminal device comprising:

a unitary housing of the mobile terminal device comprising at least one telecommunications component and a camera system comprising a lens module which enables taking pictures with optical imaging properties given by the lens module; and

a means for changing optical properties of the lens module, the means being adapted to cooperate with the lens module of the camera system to enable taking pictures with changed optical imaging properties, wherein a part of the unitary housing comprises the means for changing optical properties.

107. (Previously Presented) A mobile terminal device according to claim 106, wherein the part of the unitary housing comprising the means for changing optical properties is detachably connected to the camera system.

108. (Previously Presented) A mobile terminal device according to claim 106, wherein the part of the unitary housing integrates an assembly of a plurality of means for changing optical properties each being adapted to cooperate with the lens module of the camera system, wherein the assembly can be changed upon actuation.

109. (Previously Presented) A mobile terminal device according to claim 106, wherein the means for changing optical properties is at least one of a lens, an objective comprising lenses, at least one filter, and a diffractive optical element.

110. (Previously Presented) A mobile terminal device according to claim 106, wherein the entire camera system is built-in the mobile terminal device.

111. (Cancelled)

112. (Previously Presented) A mobile terminal according to claim 106, wherein the mobile terminal device is a mobile phone.

113. (Previously Presented) A part of a unitary housing of a mobile terminal device comprising at least one telecommunications component and a camera system, wherein the part of the housing comprises means for changing optical properties of a lens module of a camera system of the mobile terminal device, wherein the camera module with the lens module enables taking pictures with optical properties given by the lens module and the means are adapted to cooperate with the lens module of the camera system to enable taking pictures with changed optical imaging properties.

114. (Previously Presented) A part of the unitary housing according to claim 113, wherein the means for changing optical properties is detachably connected.

115. (Previously Presented) A part of the unitary housing according to claim 113, wherein the part of a housing is detachably connected to a lens module or a camera system.

116. (Previously Presented) A part of the unitary housing according to claim 113, wherein the part of a housing integrates an assembly of a plurality of means for changing optical properties, wherein the assembly of lenses can be changed upon actuation.

117. (Previously Presented) A part of the unitary housing according to claim 113, wherein the means for changing optical properties is at least one of a lens, an objective comprising lenses, at least one filter, and a diffractive optical element.

118. (Cancelled)

119. (Previously Presented) A part of the unitary housing according to claim 113, wherein the mobile terminal device is a mobile phone.

120. (Previously Presented) An apparatus for changing optical properties of a lens module of a camera system of a mobile terminal device, wherein the camera system comprising the lens module enables taking pictures with optical imaging properties given by the lens module, the apparatus being comprised by a part of a unitary housing of the mobile terminal device comprising at least one telecommunications component and the camera system, and the apparatus being adapted to cooperate with the lens module of the camera system to enable taking pictures with changed optical imaging properties.

121. (Previously Presented) An apparatus for changing optical properties according to claim 120, wherein the part of the unitary housing is detachably connected with the camera system.

122. (Previously Presented) An apparatus for changing optical properties according to claim 120, wherein the apparatus for changing optical properties comprises at least one means selected from the group consisting of: a lens, an objective comprising lenses, at least one filter, a diffractive optical element, and combinations thereof.

123. (Previously Presented) An apparatus for changing optical properties according to claim 120, wherein the unitary housing is a housing of an external camera system attached to the mobile terminal device as an external module.

124. (Previously Presented) An apparatus for changing optical properties according to claim 120, wherein the mobile terminal device is a mobile phone.

125. (Previously Presented) A method comprising:

changing optical properties of a lens module of a camera system of a mobile terminal device by actuating a means for changing the optical properties of the lens module to cooperate with the lens module to enable taking pictures with changed optical imaging properties, wherein the means for changing the optical properties are located in a unitary housing that also includes at least one telecommunications component of the mobile terminal device.

126. (Previously Presented) A method for changing optical properties according to claim 125, wherein the apparatus for changing optical properties comprises at least one means selected from the group consisting of: a lens, an objective comprising lenses, at least one filter, a diffractive optical element, and combinations thereof.

127. (Previously Presented) A method for changing optical properties according to claim 125, wherein the camera system is built in the mobile terminal device.

128. (Cancelled)

129. (Previously Presented) A method for changing optical properties according to claim 125, wherein the mobile terminal device is a mobile phone.

130. (Previously Presented) A system comprising:

a mobile terminal device having a unitary housing comprising a camera system having a lens module, which enables taking pictures with optical imaging properties given by the lens module and at least one telecommunications component; and

a means for changing optical properties adapted to cooperate with the lens module to enable taking pictures with changed optical imaging properties, the means for changing optical properties being arranged with the lens module.

131. (Previously Presented) A system according to claim 130, wherein the mobile terminal device is a mobile terminal device according to claim 106.

132. (Previously Presented) A system according to claim 130, wherein the mobile terminal device is a mobile terminal device according to claim 107.

133. (Previously Presented) A system according to claim 130, wherein the mobile terminal device is a mobile terminal device according to claim 108.

134. (Previously Presented) A system according to claim 130, wherein the mobile terminal device is a mobile terminal device according to claim 109.

135. (Previously Presented) A system according to claim 130, wherein the mobile terminal device is a mobile terminal device according to claim 110.

136. (Previously Presented) A system according to claim 130, wherein the mobile terminal device is a mobile terminal device according to claim 111.

137. (Previously Presented) A system according to claim 130, wherein the mobile terminal device is a mobile terminal device according to claim 112.

138. (Previously Presented) A system according to claim 130, wherein the means for changing optical properties is means for changing optical properties according to claim 120.

139. (Previously Presented) A system according to claim 130, wherein the means for changing optical properties is means for changing optical properties according to claim 121.

140. (Previously Presented) A system according to claim 130, wherein the means for changing optical properties is means for changing optical properties according to claim 122.

141. (Previously Presented) A system according to claim 130, wherein the means for changing optical properties is means for changing optical properties according to claim 123.

142. (Previously Presented) A system according to claim 130, wherein the means for changing optical properties is means for changing optical properties according to claim 124.

143. (Previously Presented) A mobile terminal device comprising:

a camera system;

a part of a unitary housing of the mobile terminal device comprising the camera system and at least one telecommunications component, wherein the part of the housing is detachable from the mobile terminal device and comprises at least part of a lens module adopted to cooperate with said camera system.
